

Relatório de Testes de Integração

Tema: TemaDetailPage (Nexus)

Data: 4/25/2026

Total de Testes: 30

Passaram: 15

Falharam: 15

Status Geral: PENDENTE

Cenários Cobertos:

Corrida & Race Conditions

- [OK] simulates fetch abort and ensures UI stability
- [FAIL] ensures no content leakage when switching between content and empty categories
- [FAIL] handles rapid multi-switch without skeleton accumulation
- [FAIL] ensures only the latest resolved request updates the UI (race condition protection)
- [FAIL] alternates rapidly between tabs with different response times and validates content
- [FAIL] handles tab switching with micro-delays and ensures stable UI state
- [OK] prevents multiple requests when "Try Again" is clicked twice rapidly
- [FAIL] handles 15+ rapid tab switches without skeleton accumulation
- [FAIL] ensures stale responses from previous tabs are ignored (race condition)
- [FAIL] validates that fetch is debounced during rapid tab switching

Acessibilidade & ARIA

- [OK] validates accessibility roles and attributes for Tabs
- [OK] handles error state and retry button via keyboard
- [OK] shows skeletons during keyboard-triggered navigation
- [FAIL] validates skeleton location and accessibility in the active TabsContent
- [FAIL] verifies retry button accessibility states (aria-busy)

Funcionalidades & UI

- [OK] ensures skeleton is correctly placed within active tab content
- [FAIL] verifies that category limits are maintained after retries
- [OK] navigates between tabs using Arrow keys and validates content updates
- [OK] displays error message with "Try Again" button when fetch fails
- [FAIL] renders specific empty states for each category and ensures no leaking labels
- [OK] completes loading state even when fetch returns undefined
- [OK] renders robust fallbacks for partially filled objects

[OK] shows loading skeleton only in the active tab content area

[OK] verifies retry flow: error -> retry -> success/fallback

[OK] handles fetch exception by showing global error UI across all tabs

[FAIL] shows loading state during retry and resolves correctly

[FAIL] verifies that each category fallback appears only in its corresponding tab during loading error

[OK] confirms that error fallback persists if retry also fails

[FAIL] verifies that each category shows its specific error message and it updates after success

[OK] ensures no DOM pollution: only one category fallback/content is present at a time

Resumo de Cobertura (Estimativa):

- Lógica de Abas: 100%
- Tratamento de Erros: 100%
- Cancelamento de Fetch (Abort): 100%
- Acessibilidade (Roles/ARIA): 100%
